ERI GROUP OPENS NEW 34,000 SF MANUFACTURING SPACE

Golden, CO – March 19, 2024 – ERI Group, a leader in end-to-end medical product design and development, quality assurance, regulatory affairs and contract manufacturing services, announces that it has opened a 34,000 square-foot manufacturing facility located at 5045 Robb Street in Arvada, Colorado. The new manufacturing facility will allow ERI Group to expand its contract manufacturing services and is located between the company’s current headquarters in Golden and the design studio in central Denver.

The new space will support the company’s ongoing growth and expansion of its manufacturing capabilities. Complementing the new space, ERI announces continued growth across all divisions as one of the most comprehensive medical, healthcare and wellness product development companies focusing on high-value, complex electromechanical equipment.

“Our new manufacturing facility represents not just an expansion, but a testament to our dedication to innovation, quality and customer satisfaction,” says Natasha Bond, CEO of ERI Group. “Our mission is to serve medical device companies, entrepreneurs and visionaries who bring life-changing products to market and through our new expanded facility, we can meet the needs of more customers longer into their product journey.”

ERI Group’s new manufacturing facility is equipped with advanced technology and fully integrated inventory management systems. The new facility not only enhances ERI Group’s operational efficiency but also opens up substantial opportunities for future expansion.

“This new manufacturing facility will better position us to increase our capacity, expand our scope of services and volume to better meet the needs of our customers,” says John Mann, Vice President of Operations for ERI Group. “Both of our existing sites, as well as the new manufacturing facility, will operate under the same stringent quality standards, as evidenced by our ISO-13485 and ISO-9001 certifications, ensuring a smooth and planned transition of all ongoing manufacturing commitments, with consistency in staff and quality management systems across all three sites.”
